

Hereditary Cancer Follow-Up Initiative

The Hereditary Cancer Program offers longitudinal follow-up for adults with a hereditary cancer condition.

This includes people who:

- have a **pathogenic variant (or mutation)** in a hereditary cancer gene,
- or a **clinical diagnosis of a hereditary cancer syndrome**, with or without a history of cancer.

Participants are sent an annual survey to check in, with follow-up provided by a Hereditary Cancer Program team member as needed.

Refer hereditary cancer gene mutation carriers $\geq$ age 19 to the Hereditary Cancer Program to enroll.
